

SIURALTA  
**GRIS**  
VINSNUS

Grey grenache, a mutation of red grenache, has an orange color that becomes grey when ripe. Difficult to compare with other references, SiurAlta Gris has a boisterous character, terpenic notes and is able to flirt with oxidation. Old grey vines barely exist, they're often mixed with other grenaches. In order to make Gris possible, 2 hectares in Gritella were replanted, close to Siurana. In elevated hillsides with Northern orientation.

APELLATION	MONTSANT
VARIETIES	<i>Grey grenache</i>
ALTITUDE	<i>760/820 m</i>
SOIL	<i>Yellow clays</i>
SO2 TOTAL	<i>18/20 mg/l</i>
FARMING	<i>Organic</i>
DENSITY	<i>6.000 vines/Ha</i>
HARVEST	<i>Beginning of September</i>
FERMENTATION	<i>Whole cluster pressing after 4 hours maceration</i>
AGEING	<i>8 months in amphoras and steel vats</i>
PROPERTIES	<i>Alcohol 12.5/13%; acidity 6.6/7.2 g/l; ph 3.0/3.1</i>
